

Easy-Spread Top Dress

Environmentally safe for your family and pets, it is 100% natural. Top dressing is a food source for increased microbial activity which creates a healthier soil for your lawn. It also increases drought tolerance by trapping nutrients and moisture in the root zone.

Top dressing replenishes soil conditions in your lawn which may help prevent weed growth as weeds prefer poor quality soil.

Easy-Spread differs from all other composts for it has 8% moisture compared to 40%-50%. It also contains an NPK Value of 2-1-.05 to perform as a fertilizer for even better results. According to customers that have tested Easy-Spread Top Dress, 44lbs per 1000 sq ft. gave them best results. Compared to traditional top dressing products we have pelletized it for everyone's convenience. A normal spreader is all you need.

No project is too small or large, it is available in 10kg, 20kg or 1000kg totes. Easy-Spread Top Dress gives best results if you apply in the spring and fall.
